Call for Papers

Nineteenth Australasian Computer Science Conference (ACSC'96)

Melbourne, Australia, 31 January – 2 February 1996

ACSC'96 will be held at The University of Melbourne from 31 January to 2 February, 1996, in conjunction with *Seventh Australasian Database Conference* (ADC'96) and *Computing: The Australasian Theory Symposium* (CATS'96). The conference is run under the auspices of the Computer Science Association (Australasia) and is jointly hosted by The University of Melbourne and RMIT.

Aim and Scope

ACSC is the major general computer science conference in the Australasian region and is held annually. Papers in all fields of computer science research and education are invited.

Submission Details

Submitted papers should be no longer than the equivalent of ten pages of 10-point typeface when in two column format (approximately 6000 words). Initial submissions should be single column with wide margins and 1.5 line spacing. Papers must include author names, affiliations, e-mail addresses, an address for correspondence, a 200 word abstract, and 3–6 keywords identifying the subject area. Four copies should be submitted.

To be considered, papers must be received by the indicated date. For final submissions, LaTeX style files and MS Word style sheets will be provided at the Melbourne WWW server (see opposite). Authors unable to access or use these style files will be asked to prepare papers of at most ten pages in 10-point, two-column format.

Papers will be judged on originality, significance, correctness, and clarity. The contribution of the paper should be clearly explained in both general and technical terms, and authors should make every effort to ensure that the technical content of their papers is understandable by a broad audience. Submission of a paper should be regarded as an undertaking that, should the paper be accepted, at least one of the authors will attend the conference to present the work.

The Location

Melbourne is a multi-cultural city of about three million people. Melburnians take great pride in their extensive parks and gardens, and in their wide range of restaurants and other entertainment options. The University of Melbourne is on the edge of the central business district, close to one of the major entertainment precincts. From the University there are tram connections to the rest of the city. Melbourne has direct air links with all other Australian capital cities, several ports in New Zealand, most main European cities, most capital cities in Asia, and with the west coast of North America. The weather in January is typically fine and warm with low humidity, but rain is possible at any time of year.

Call for Tutorials

It is planned to have tutorials on the Monday and/or Tuesday before the conference. People interested in offering a tutorial should email a proposal to `acsc96@cs.mu.oz.au` before 1 July 1995.

General Chairs

Alistair Moffat, University of Melbourne
Justin Zobel, RMIT

Program Committee Chair

Rao Kotagiri, University of Melbourne

Program Committee

David Abramson, Griffith University
Chris Barter, University of Adelaide
John Debenham, University of Technology, Sydney
Peter Eades, University of Newcastle
Jenny Edwards, University of Technology, Sydney
Alan Fekete, University of Sydney
Gopal Gupta, James Cook University
Graham Hellestrand, Univ. of New South Wales
Stephen Hood, DSTO
John Hurst, Monash University
Chris Johnson, Australian National University
Chris Marlin, Flinders University
Alistair Moffat, University of Melbourne
Ron Morrison, University of St. Andrews
John O'Callaghan, CSIRO
Ron Sacks-Davis, RMIT
John Staples, University of Queensland
Jim Welsh, University of Queensland
Ian Witten, Waikato University
